

Spreadsheet Max

Spreadsheet Max has a series of very easy to use powerful spreadsheets.

CUTLISTING, LAYOUTS, DXF OUTPUT FOR 5 PIECE PANEL DOORS, WAINSCOTING, CABINET SIDES, CABINET PARTS AND MUCH, MUCH MORE!

If you build your own cabinet doors you know how hard it is to accurately and quickly create a cut list for your doors. There are many programs available, but usually they are designed for 1 door at a time or they are part of a large expensive program.

Usually they give you almost no flexibility to create a nice compact printout. With Excel, Cutlist Plus, and Spreadsheet Max you can have all this and much more!

CLICK HERE TO COPY PANEL SIZES

From Excel to DXF in seconds not hours!

Then go to Cutlist Plus and click on this icon! It is that simple!

Created to work seamlessly with Cutlist Plus

THANK YOU
"Thank you so much for the custom made spreadsheet that you developed for me. Since I use the 3D calculator, it takes me 45 minutes to prepare a cutting list and optimize all parts in CutList Plus for a full kitchen. It used to take me a good 5 to 6 hours to prepare them. It's very easy to use. Enter height, width, depth & your cut list is done. 3D Calculator has saved me time and money and I have more time to do other things in my business. Thank you so much for your time and dedication to developed this fantastic spreadsheet. Keep up the good work." - Ivo, Melbourne-Victoria, Australia
